09-MAY-2001; 2001US-0289727P. 08-MAY-2002; 2002WO-US014669. 14-NOV-2002.

New human kinase proteins and polynucleotides, useful for cosmetic and nutriceutical applications, drug screening, clinical trial monitoring, diagnosing or treating diseases associated with biological disorders or imbalances.

The invention relates to novel human polypeptides (NHP) having kinase activity and polynucleotides encoding them. The polynucleotides, proteins are useful for drug screening, clinical trial monitoring, and diagnosing or treating diseases or disorders associated with biological disorders or imbalances. The proteins and polynucleotides are useful in comestic and nurricentical applications, for identifying protein coding sequences and mapping a unique gene to a particular chromosome. The sequence of the polynucleotides and proteins can also be used as additional DNA markers for restriction fragment length polymorphism analysis, or in forensic biology. The present sequence represents a NHP kinase

                                                                                                                                  The present invention relates to novel human secretory or membrane proteins (ADAS4072-ADAS5710) and their coding sequences (ADAS4031-ADAS4071). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    64. 71 Anotes "ATP/GTP binding site motif A (P-loop)" /notes "ATP/GTP binding site motif A (P-loop)" /notes "ATP/GTP binding site motif A (P-loop)"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to novel human kinases and phosphatases (KPP) polypeptides and polymucleotides. Polypeptides of the invention are used for screening againsts and antagonists. They are used to make monoclonal or polyclonal or antibodies, which are used in diagnostic tests for conditions or diseases associated with expression of the polypeptide. They are also useful for diagnosting or treating diseases or conditions associated with decreased expression or overexpression of functional KPP e.g. cardiovascular or neurological disorders or cancer. The invention is useful in gene therapy. The present sequence is human KPP protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 VILGPPASGKTTIAMMLCKHLNSSLLTLENLILNEFSYTATEARRLYLQRKTVPSALLVQ 120

The invention relates to novel isolated polypeptides, mature form of the polypeptide, a sequence that is 95% identical to the polypeptide or the polypeptide comprising one or more conservative substitutions. The NOVX polypeptide is useful for treating or preventing a pathology associated with the polypeptide e.g. disorders associated with aberrant expression or activity of the polypeptide, such as cancer, diabetes, obseity, and andocrine, CNS and inflammatory disorders. They can also be used in various detection and screening assays, chromosome mapping, tissue typing and predictive medicine. This sequence corresponds to one of the polypeptides of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     GWVLHGVPRDLDQAHLLARLGYNPNRVFFLANVPFDSIMERLTLRRIDPVTGERYHLMYKP 420

                                                                                           The invention relates to novel isolated polypeptides, mature form of the polypeptide, a sequence that is 95% identical to the polypeptide or the polypeptide comprising one or more conservative substitutions. The Novx polypeptide is useful for treating or preventing a pathology associated with the polypeptide e.g. disorders associated with aberrant expression or activity of the polypeptide, such as cancer, disbetes, obesity, and endocrine, CNS and inflammatory disorders. They can also be used in various detection and screening assays, chromosome mapping, tissue typing and predictive medicine. This sequence corresponds to one of the
                                                                                                                                                                                                                                                                                                                                135

The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAAI8642-AAM46213) with noctropic.

Cocoded polypeptides (AAAI8642-AAM46213) with noctropic.

Immunosuppressant and cytostatic activity. The polynuclectides are useful in gene therapy. A composition containing a polypeptide or polynuclectide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous for alread neuropathies and central nervous system disease, anyotrophic lateral sclerosis, and shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukeemias and control specification chis patent did not form by the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          195

The invention relates to human kinase PKIN proteins and their corresponding cDNAs. A composition containing PKIN agonist is useful for treating a disease or condition associated with decreased expression of PKIN and a composition comprising PKIN antagonist is useful for treating a disease or condition associated with overexpression of PKIN. The disorders include cancer (leukaemia, adenocarcinoma, Impubnoma, melanoma, allergies, adult respiratory distress syndrome, attorimume thyroiditis, gout, bronchitis, Crohn's disease, diabetes autoimume thyroiditis, gout, bronchitis, Crohn's disease, diabetes mellitus, multiple sclerosis, Good pasture's syndrome, creating syndrome, uveitis, ulcerative colitis, osteoporosis, pancreatitis, potozoals and helminthic infections; bacterial, parasitic, fungal, viral, protozoal and helminthic infections; crowth and development disorders (arteriosclerosis, cirrhosis, hepatitis, crohing's syndrome, typothyroidism, cerebral palsy, cataracts); cardio croscular disease (arteriovenous fistula, hypertension, vaculitis, crohing sease, chronic bronchitis, lung tumours); lipid disorder (fatty liver, Fabry's disease, Niemann-Pick's disease, chronic broncherent sequence is human protosi.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           264
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             324

The invention discloses a polynucleotide comprising a sequence selected from 1970 fully defined nucleotide sequences which encode novel CC from 1970 fully defined nucleotide sequences which encode novel polypeptides. Also claimed is a polypeptide encoded by the polynucleotide for the polynucleotide, immunologically sessiving the polypeptide or peptide of the polynucleotide, immunologically sessiving the polypeptide or peptide of the polynucleotide by contacting the polypeptide or peptide of the polynucleotide by contacting the polynucleotide or peptide of the matribody of the encoded protein, and observing the binding contacting the two, a transformant carrying the polynucleotide in an expressible manner and a antistance polynucleotide. The oilgonucleotide captures to expressible manner and an antistance polynucleotide. The oilgonucleotide of the secreting the polynucleotide. The polynucleotide and encoded gene may be included in them, for developing a diagnostic marker or medicines for regulation of their expression and activity, or as a probe of gene therapy. The genes are involved in tissue and/or cell a transcription-related proteins, signal transduction-related proteins, centering them can be used as indicators for diseases (e.g. osteoporosis, centrological diseases, cancer, tumours. The CDNA may be used to regulate to the activity or expression of the encoded protein to treat diseases. The copy expression of the menced as indicators for diseases (e.g. osteoporosis, centrological diseases, cancer, tumours. The CDNA may be used to regulate the encoded protein of the invention. Note: Some of the sequence data for this patent is not represented in the printed general partern of the sequence information supplied by the contact of the copy of the copy of the procession of the sequence information supplied by the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New adenylate kinase polypeptide for diagnosing/treating cellular proliferative and/or differentiative, neurological, immune, inflammatory, lymphatic, cardiovascular, respiratory and hematological disorders.
                                                                                                                                                                                                                                                                                                                                                             Human; 27802 protein; adenylate kinase; cellular proliferative disorder; neurological disorder; inflammatory disorder; hymphatic disorder; cardiovascular disorder; inflammatory disorder; haematological disorder; cardiovascular disorder; perpiratory disorder; haematological disorder; crohn's disease; atherosclerosis; pernicious anaemia; asthma; leukaemia; acquired immune deficiency syndrome; NBS; multiple sclerosis; lymphoma; Alzheamer's disease, systemic lupus erythematosus; SLB; gene therapy; lymphoblastic leukaemia; T-cell neoplasm; cytostatic; neuroprotective; tissue typing; antiarterioslerotic; chromosomal mapping; nootropic; dermatological; antiinflammatory; immunosuppressive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present amino acid sequence is human 27802 adenylate kinase. The 27802 protein and its corresponding nucleotide sequence is useful for modulating, disgnosing and treating cellular proliferative and/or differentiative, neurological, inflammatory, lymphatic, cardiovascular, immune, respiratory and haematological disorders. 27802 sequence is useful for treating immune disorders (e.g., crohn's disease), disorders involving blood vessels (e.g., atherosclerosis), disorders involving red cells (e.g., pernicious anaemia), respiratory disorders involving red disorders involving brain and lymph nodes (e.g. acquired immune disorders shoolving brain and lymph nodes (e.g. acquired immune deficiency syndrome (AIDS), multiple sclerosis, Alzheimer's disease), disorders involving T-cells (e.g., systemic lupus erythematosus),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /note= "Human mature 27802 adenylate kinase"

diseases involving haematopoietic stem cells (e.g., leukaemia), disorders involving B-cells (e.g., lymphoblastic leukaemia/lymphoma) and disorders involving precursor T-cell neoplasms. 27802 sequence is useful for modulating cellular growth and/or cellular metabolic pathways, particularly for regulating one or more proteins involved in growth and metabolism. 27802 DNA is used in gene therapy. 27802 sequence or its antibody are useful in screening assays, detection assays (e.g., chromosomal mapping, tissue typing, forensic biology), preventive medicine (e.g., diagnostic assays, prognostic assays, monitoring clinical trials and pharmacogenomics) and in methods of treatment

activity such as splenomegaly, pulmonary embolism, arrests and primary brain lymphoma. The human phosphatidylserine synthase-like molecules are useful for modulating the biosynthetic pathway involving the synthesis of the membrane phosphatidylserine (FS). They human phosphatidylserine synthase-like molecules are useful for treating disorders associated with aberrant human phosphatidylserine synthase activity such as tuberculosis, astrocytes and Hodgkin disease. The human 5698, MDA fragmentation factor-like molecules are useful for modulating apoptotic events, including DNA fragmentation. The human 5698 molecules are useful for treating diseases such as autoimmune disorders, neurodegenerative diseases and cancer. The

human 32621, phospholipid scramblase-like modecules are useful for modulating immune, haematopoietic and blood clotting systems. They are useful for treating a disorder associated with aberman human phospholipid scramblase-like protein activity such as leukopaenia and systemic sclerosis. The human 27802 adenylate kinase are useful for modulating cellular growth and/or cellular metabolic pathways. They are

proteins, phosphatidylserine synthase-like proteins, DNA fragmentation factor-like proteins, phospholipid scramblase-like proteins or adenylate kinase proteins and polynucleotides encoding such proteins. The human Arpase-like molecules are useful for modulating Arpase function. They are useful in modulating organelle biogenesis, cell-cycle regulation, protein degradation and vesicle-mediated transport. They are also useful for transing disorders associated with aberrant Arpase-like expression or treating disorders associated with aberrant Arpase-like expression or treating disorders associated with aberrant Arpase-like expression or treating disorders.

present invention relates to novel proteins including ATPase-like

Claim 8; Fig 28; Opp; English.

```
New isolated polypeptides including phosphatidylserine synthase-like polypeptide useful for identifying a compound which binds and modulates activity of the polypeptide useful for treating diseases, e.g. cancer.
                                                                                                                                                                                                                                                                              706...211 / Annual Control of the Co

The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAMS1642-AAM4213) with noctropic,

concoded polypeptides (AAMS1642-AAM4213) with noctropic,

immunosuppressant and cytostatic activity. The polynuclectides are useful

continuous in the invention may be used to treat diseases of the peripheral nervous

system, such as peripheral nervous injuries, peripheral nervous

containsed neuropathies and central nervous system diseases, such as

localised neuropathies and central nervous system diseases, such as

altheimer's, Parkinson's disease, Huntington's disease, amyotrophic

lateral sclerosis, and Shy-Drager Syndrome. Other uses include the

utilisation of the activities such as: Immune system suppression,

activin/inhibin activity, chemoteactic/chemotante cativity, haemostatic

and thrombolytic activity, ancer diagnosis and therapy, drug screening,

assays for receptor activity, arthritis and inflammation, leukaemias and

pathological condition in a subject, by determining the presence or amount of expression of the polypeptide in a biological sample and diagnosing a pathological condition or a susceptibility to a pathological condition based on the presence or amount of expression of the condition based on the presence or amount of expression of the perpeptide. The polypeptide is also useful for identifying a binding partner and determining whether the binding pattner and clerk is useful for preventing, treating, or amaliorating a medical condition, which involves administering the polypeptide or the nucleic acid to a mammalian subject. The nucleic acid polypeptide or the nucleic acid to a pathological condition or susceptibility to a pathological condition or susceptibility, thrombocytopenia. The polypeptide, the nucleic acid and the antibody are useful as immunosuppressive agents, the nucleic acid and the antibody are useful as immunosuppressive agents, affinity antibodies and increase serum immunosuppressive agents.

Or season sequence represents the amino acid sequence of a novel human caffinity antibodies and increase serum immunosuppressive of the manner of present esquence data for this patent did not form part of

The invention relates to polymucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell propulations. The polymucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, immunomodulatory activities activity, tissue growth factor activity, immunomodulatory activity and activity, infinity and may be useful in the diagnosis and/or treatment of cancer, leuksemia, nervous system diagnosis and/or treatment of cancer, leuksemia, nervous system diagnosis, arthritis and inflammation. Note: Records for SBO ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     96 VPDSLIMKVLSQRLDQQDCIQKGWVLHGVERDLDQAHLLNRLGYNPNRVFFLNVPFDSIM 155

```
The invention relates to polymucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polymoleotides and polypeptides are useful in gene therapy, vaccines or e.g. stem cell growth factor activity, hematopolesis regulating activity, tissue growth factor activity, hematopolesis regulating activity, tissue growth factor activity, immunomodulatory activity and crowinishin activity and may be useful in the disponsis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Nucleic acids encoding polypeptides with cytokine-like activities, useful in diagnosis and gene therapy.
                                                                                                                                                                                                                                                                                                                                                                     Tang YT, Liu C, Drmanac RT, Asundi V, Zhou P, Xu C, Cao Y;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Vature 392, 353-358, 1998

A; Title: The complete genome of the hyperthermophilic bacterium Aquifex aeolicus.
A; Reference number: A70300; MUID: 98196666; PMID: 9537320
A; Reference number: A70300; MUID: 98196666; PMID: 9537320
A; Status: preliminary; nucleic acid sequence not shown; translation not shown
A; Molecule type: DNA
A; Residues: 1-206 < AQRPS
A; Cross-references: UNIPROT: O66490; GB: AE000672; NID: 92982810; PIDN: AAC06438.1; PID: 9298
A; Experimental source: strain VF5
C; Genetics:
A; Gene: kad
C; Function:
A; Mote: magnesium required
C; Function: catalyzes reversible phosphorylation of AMP with ATP to form two ADP
A; Note: magnesium required
C; Superfamily: adenylate kinase
C; Keywords: ATP; P-loop; phosphotansferase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ademylate kinase (EC 2.7.4.3) - Aquifex aeolicus
C.Species: Aquifex aeolicus
C.Date: 08-May-1998 #sequence_revision 08-May-1998 #text_change 09-Jul-2004
C;Accession: G70307

C;Genetics:
A;Gene: adk
A;Gene: adk
C;Function: catalyzes reversible phosphorylation of AMP with ATP to i
A;Description: catalyzes reversible phosphorylation of AMP with ATP to i
A;Note: magnasium required
C;Superfamily: ademylate kinase
C;Keywords: ATP; P-loop; phosphorransferase
C;Keywords: ATP; P-loop; phosphorransferase
C;Keywords: nucleocide-binding motif A (P-loop) #status atypical
P;80-85/Region: nucleocide-binding motif B #status atypical
P;30,84,126/Active site: Ser, Asp, His #status predicted

Klein S., Gerhard D.S.;

Submitted (NOV-2003) to the EMBL/GenBank/DDBJ databases.

Submitted (NOV-2003) to the ademylate kinase family.

I. SIMILARITY: Belongs to the ademylate kinase family.

Science 302:842-846(2003).
-!- FUNCTION: This small ubiquitous enzyme is essential for maintenance and cell growth (By similarity).
-!- CATALYTIC ACTIVITY: ATP + AMP = 2 ADP.
-!- SUBCELLUIAR LOCATION: Chloroplast (By similarity).
-!- SIMILARITY: Belongs to the adenylate family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             14.6%; Score 364.5; DB 1; Length; 36.4%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Vacleic Acids Res. 30:3927-3935 (2002).

-!- FUNCTION: This small ubiquitous enzyme is essential for enritherance and cell growth.

maintenance and cell growth.

-!- CATALYTIC ACTIVITY: ATP + AMP = 2 ADP.

-!- STBUTTL ACTIVITY: ATP + AMP = 2 ADP.

-!- SUBCELLUIAR LOCATION: Cytoplasmic (By similarity).

-!- SUBCELLUIAR LOCATION: Cytoplasmic kinase family.

-!- SIMILARITY: Belongs to the adenylate kinase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                10-607-2003 (Rel. 42, Created)

FILING DATE: May 12, 1999

APPLICATION NUMBER: 60/051531

FILING DATE: May 12, 1997

ATTORNEY/AGENT INFORMATION:

NAME: Ariniello, Pamela Deneke
REGISTRATION NUMBER: 40, 489

TELECOMMUNICATION INFORMATION:

TELEPHONE: (781)893-8277

INFORMATION FOR SEQ ID NO: 4765:

SEQUENCE CHARACTERISTICS:

LENGTH: 216 amino acids

TYPE: amino acid

TOPOLOGY: linear

NOLECULE TYPE: protein

HYPOTHETICAL: YES

ORIGINAL SOURCE:

ORGANISM: Streptococcus pneumoniae

FEATURE:

Publication No. US20040031072A1
Publication No. US20040031072A1
APPLICANT: La Rosa Thomas J
APPLICANT: Kovalic David K
APPLICANT: Kovalic David K
APPLICANT: Cao Yongwei
TITLE OF INVENTION: Plants and Uses Thereof for Plant Improvement
FILE OF INVENTION: Plants and Uses Thereof for Plant Improvement
FILE REFERENCE: 38-21(5322)B
CURRENT FILING DATE: 2003-04-28
NUMBER OF SEQ ID NOS: 285684
SEQ ID NO 268668
                                                                APPLICANT: Xie, Giongshu
APPLICANT: Abuin, Alejandro
APPLICANT: Abuin, Alejandro
APPLICANT: Abuin, Alejandro
APPLICANT: Abuin, Alejandro
APPLICANT: Walke, D. Wade
TITLE OF INVENTION: Novel Human Kinases and Polynucleotides Encoding the Same
FILE REFERENCE: LEX.0344-USA
CURRENT PELING DATE: 2004-03-11
PRIOR APPLICATION WUMBER: US/10/141,634
